DETAILED ACTION

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this

Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1 and 6-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakamura et al. (U.S. 6,335,076) in view of Toriumi et al. (U.S. 6,590,070).

Nakamura et al. teaches a thermo-adhesive sheet that is used to bond circuit board layers together. The adhesive sheet has through via that have low melting solder in them (abstract, col. 5, lines 5-25 and col. 6, lines 5-20). Toriumi et al. teaches an thermo-adhesive with a methacrylic copolymer that is useful in electronic devices. The instant invention claims the use of a thermo-adhesive with a methacrylic copolymer. It would have been obvious to one of ordinary skill in the art to have used a methacrylic thermo-adhesive as the adhesive of Nakamura et al. in order to form a good bond with the circuit pattern

because of the teaching of Toriumi et al. Selection of pressure and temperature conditions for bonding is taken as being within the ordinary skill of the art absent unexpected results.
